# Design-to-Production

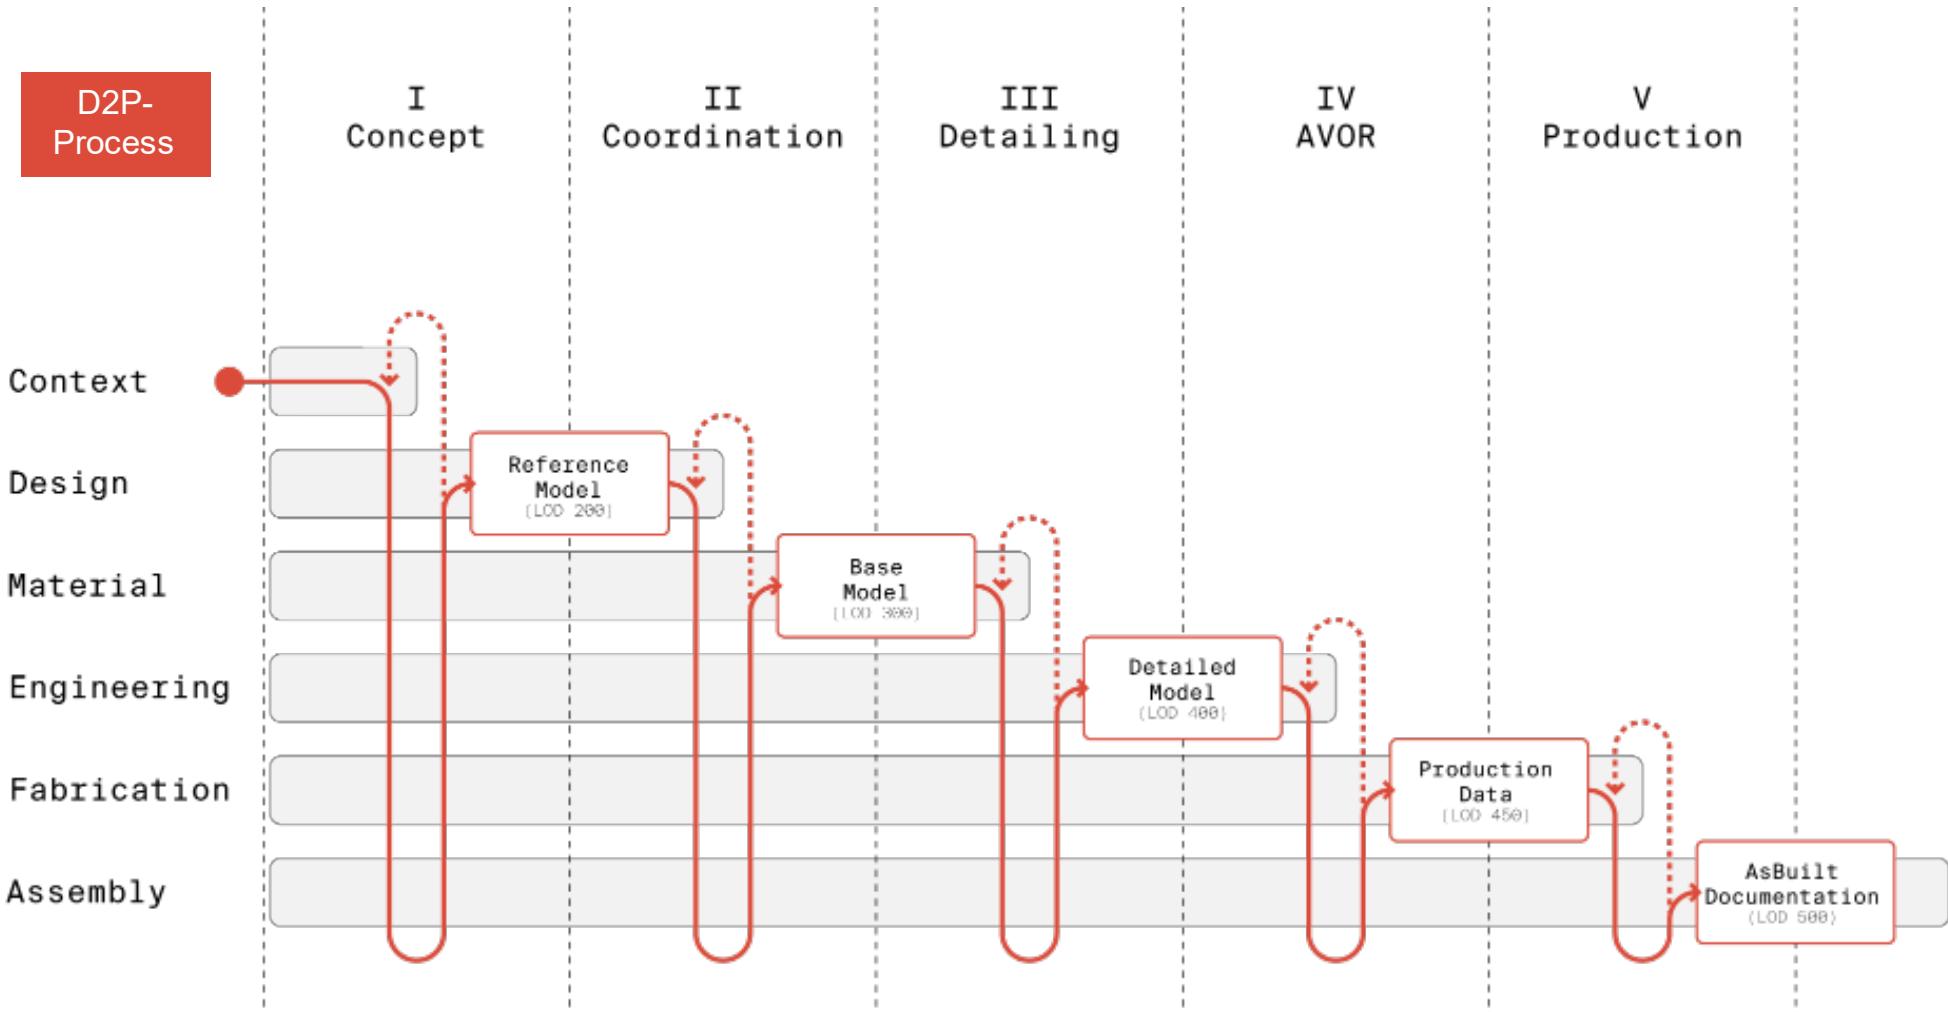

Seine Musicale - Shigeru Ban, 2014

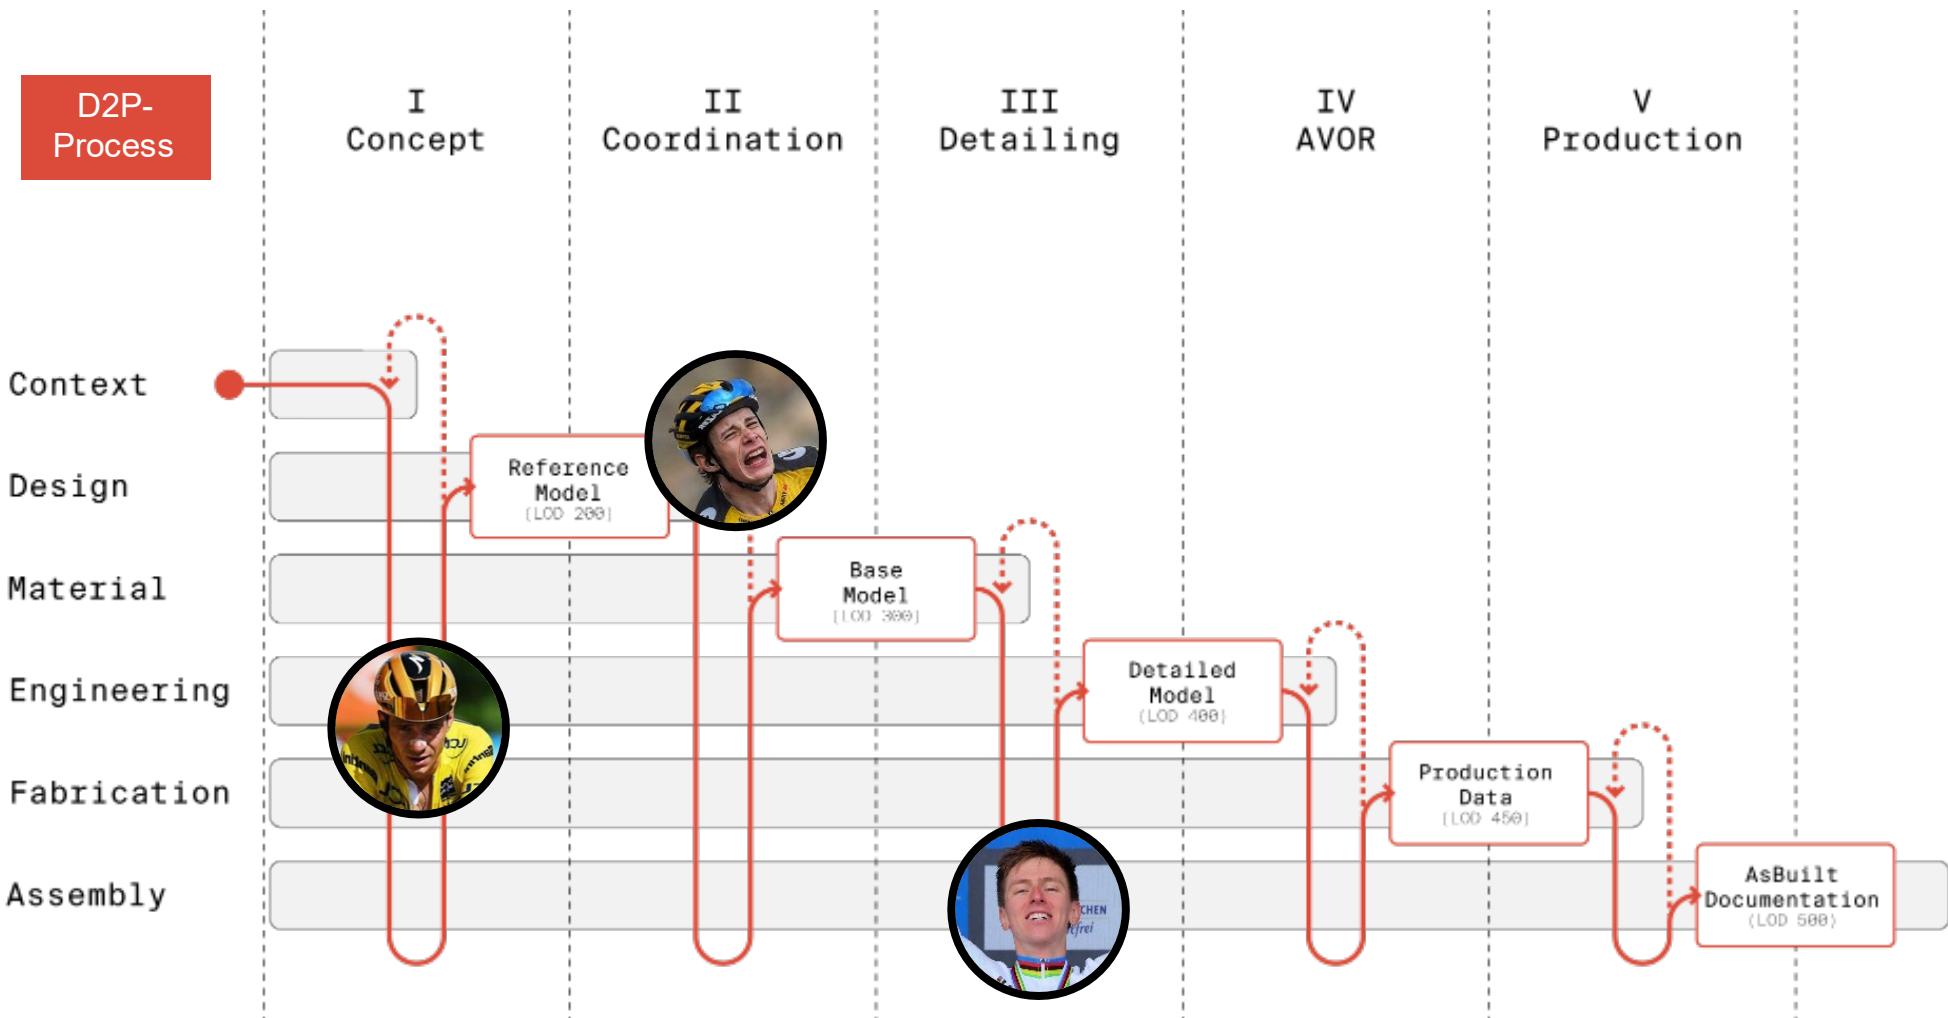

# Using Rhino models

# Succession of model stages

# But not every objects 'progress' at the same pace...

... different stages coexist in the same model

... effecti

# DON'T TOUCH OBJECTS THAT ARE ALREADY EXPORTED!

# Stage Tracking Analysis & Governance

# STAG - Stage Tracking Analysis & Governance

---

**Assign** Stages to Rhino Geometry (usertexts?).

**Visualise** Objects/Stages PowerBi style

Catch Rhino modification **Events** and **block** the operation if the object is at a different stage than the current stage.

Different stages could **filter** different events (PRODUCTION can't be touched, AVOR can modify attributes, DETAILATION can modify geometry & attributes).

Need a way to **overrule** the stage manager and apply the changes anyway.

Thank you for your attention!
